

Media

Media components include things that have to do with large media objects like Images, Video, Audio, etc.

Material Box

Material box is a material design implementation of the Lightbox plugin. When a user clicks on an image that can be enlarged, Material box centers the image and enlarges it in a smooth, non-jarring manner. To dismiss the image, the user can either click on the image again, scroll away, or press the ESC key.

Slider

Our slider is a simple and elegant image carousel. You can also have captions that will be transitioned on their own depending on their alignment. You can also have indicators that show up on the bottom of the slider.
